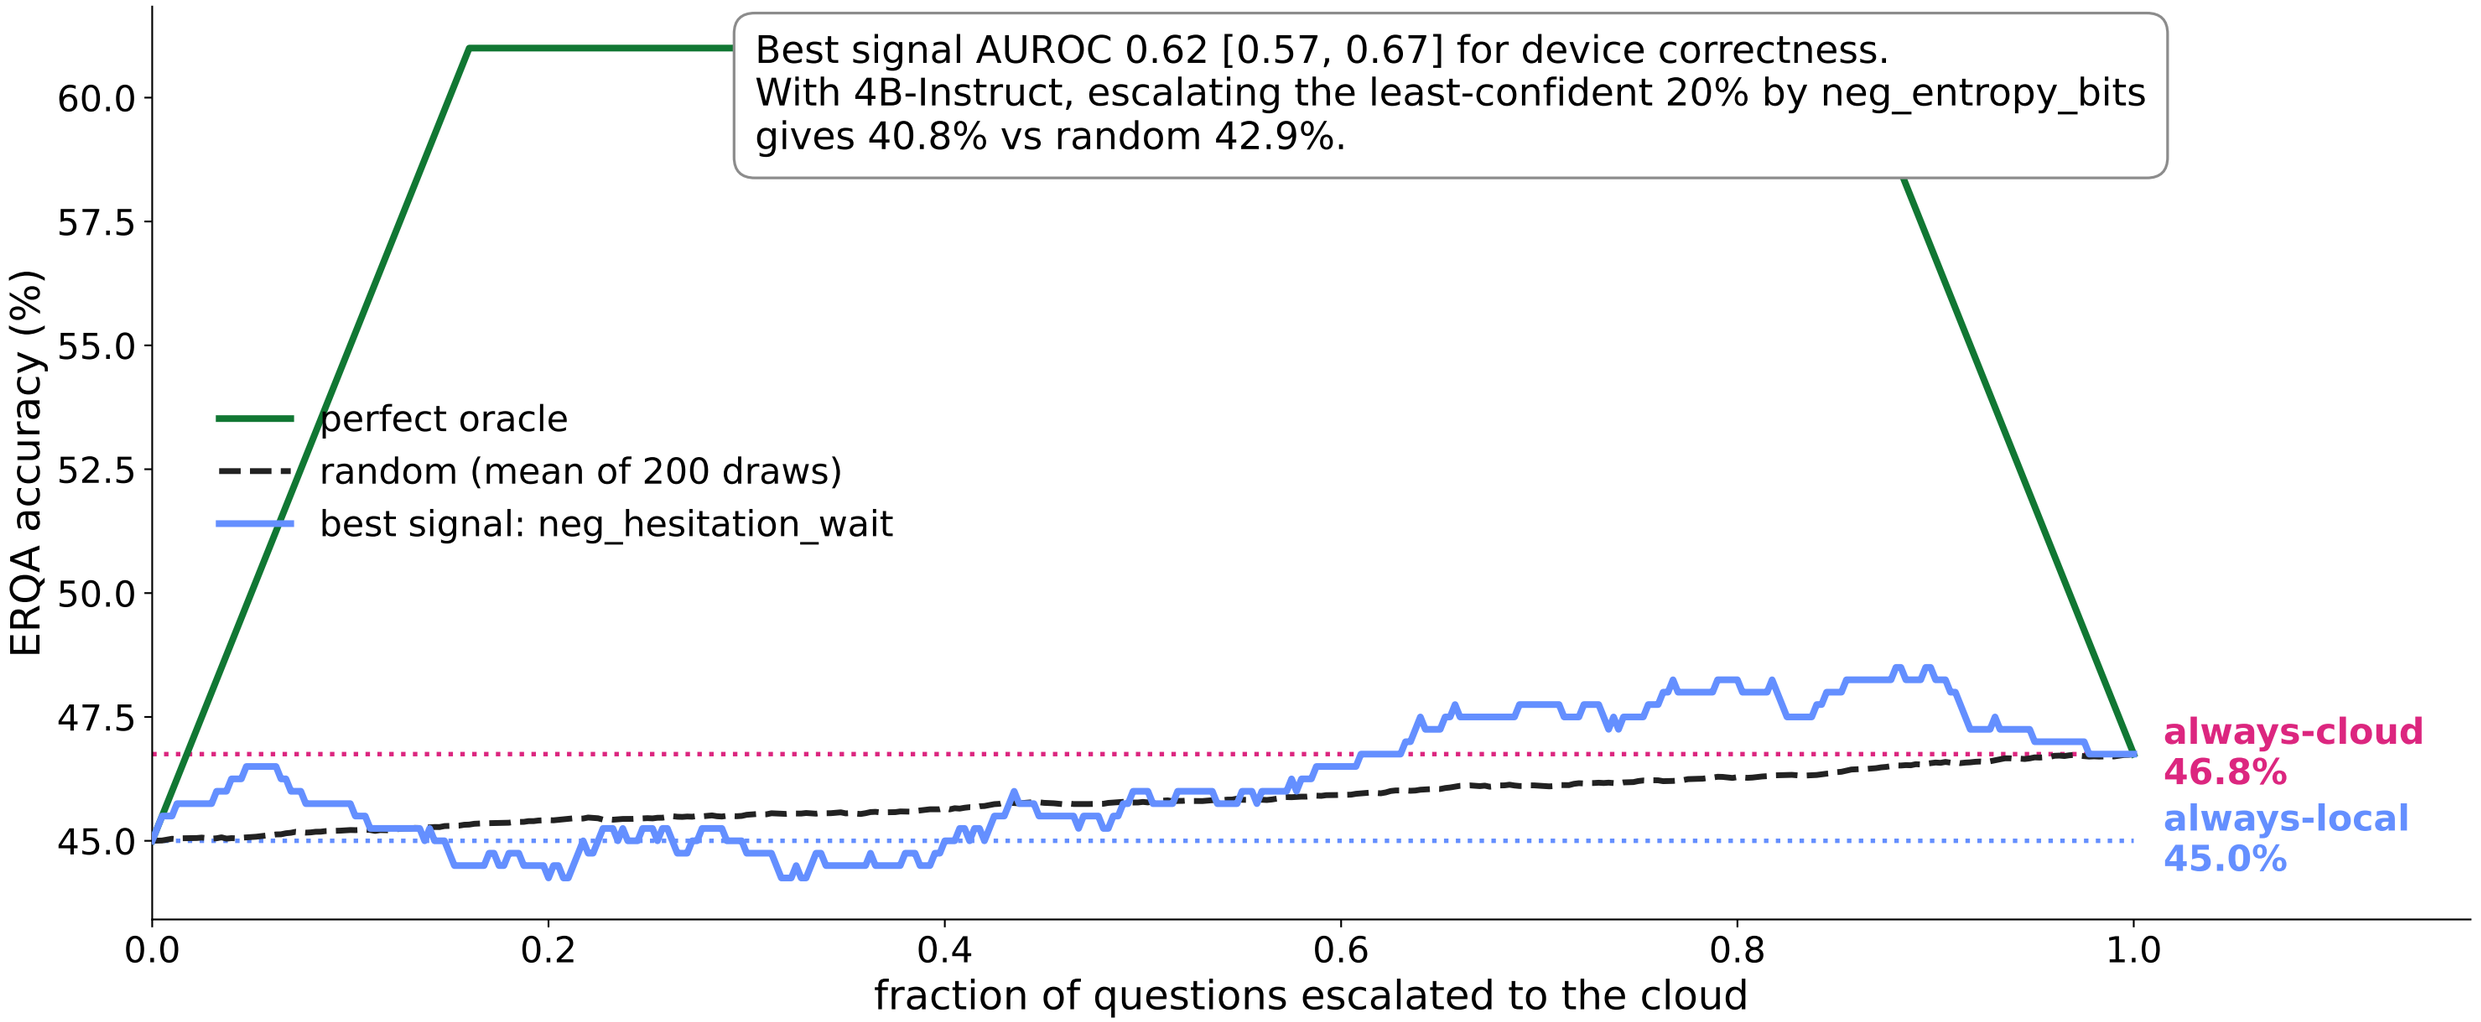
Device-side signals do not yet tell us when to escalate



Perfect oracle is an upper bound; on 4-option multiple choice it counts chance agreement as recoverable.

ERQA, device 4B-Thinking (3090 Ti HF sdpa, r4_erqa_thinking.jsonl) → cloud 32B-Instruct (H100 HF fa2, StudyR arm C), paired n=400. Backend-mismatched. Signal order is least-confident-first; AUROC from experiments/erqa/r4_analyse.py (2,000-resample question bootstrap, seed 0).
