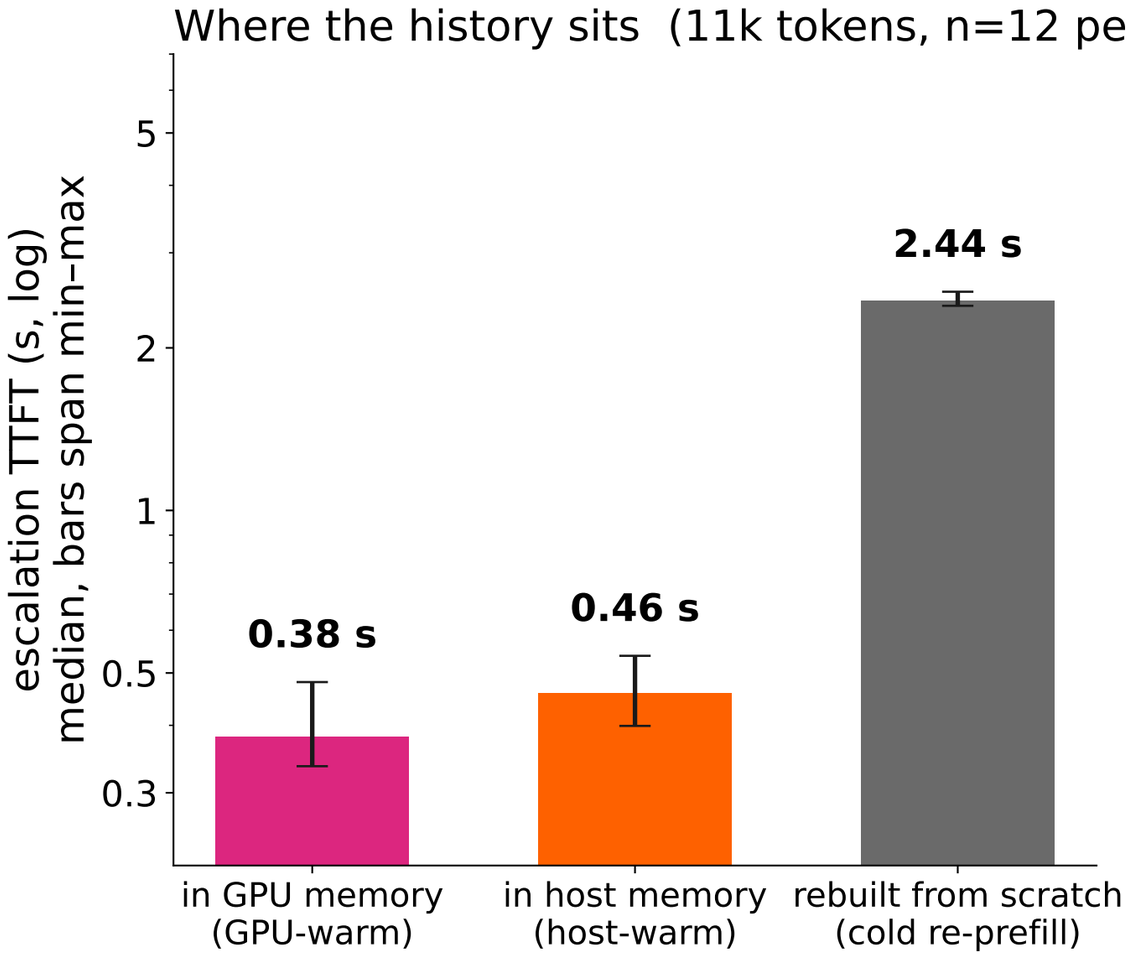
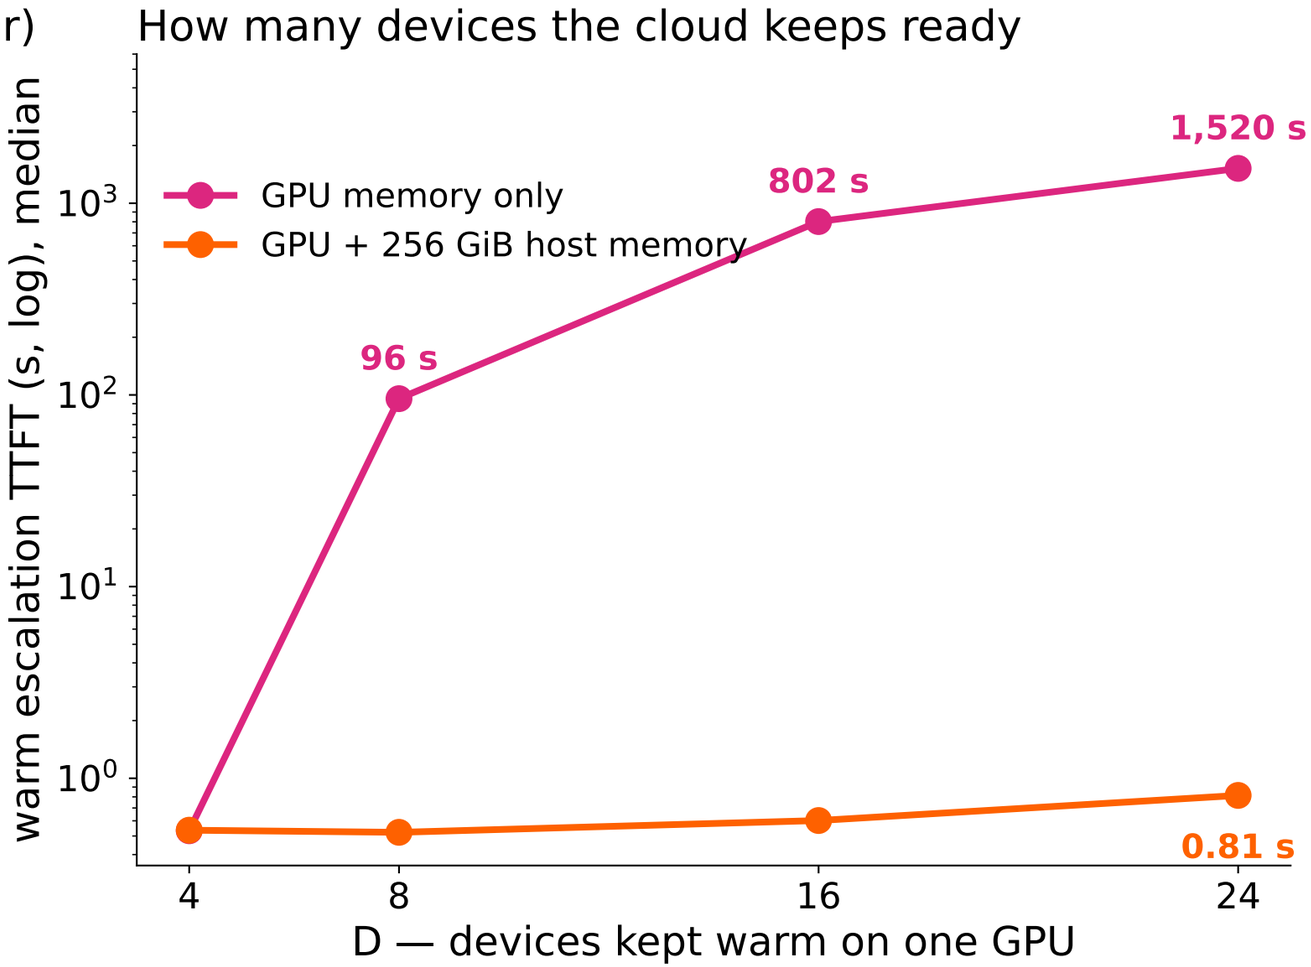
Escalation cost depends on how many devices the cloud keeps ready





History format: fixed-stride images keep full accuracy (D2 − K1 = -0.24 pp) and reuse 99% of cached state per update (RH4); a single-video history reuses 0% (RH3).

Left: StudyRH5 Part A, H100 NVL, Qwen3-VL-32B-Instruct, vLLM bf16 KV, D2 fixed-stride history, one request at a time, TTFT only, no network; host tier = vLLM OffloadingConnector, 256 GiB pinned. Right: StudyRH5 Part B, same stack, 15-min window, escalation rate 1.0.
